CHRISTIAN LEVÍ GONZALEZ RODRÍGUEZ

FULLSTACK DEVELOPER | TECHNICAL LEAD | CLOUD & DEVOPS

Sacatepéquez, Guatemala | +502 4162 8926 | clevi.gonzalez@gmail.com

PROFESSIONAL SUMMARY

Fullstack developer and systems engineer with 10+ years of professional experience across software development and telecom engineering. Build web applications, REST APIs, integrations, and automation using JavaScript/TypeScript, Node.js/NestJS, React/Next.js, Angular, and Python/FastAPI. Combine hands-on implementation with production troubleshooting, automated testing, and containerized delivery. Bring 2+ years of technical leadership, including coordinating 4–6 engineers across two telecom projects, while contributing directly to backend services and platform development.

TECHNICAL SKILLS

- **Frontend:** JavaScript, TypeScript, React, Next.js, Angular, Tailwind CSS, Vue/Nuxt.
- **Backend and APIs:** Node.js, NestJS, Python, FastAPI, C#/.NET, REST APIs, microservices, authentication and service integration.
- **Databases:** PostgreSQL, Oracle, SQL Server, MySQL, MongoDB, Elasticsearch; SQL and database migrations.
- **Cloud and delivery:** Docker, Podman, Nginx, Linux, Jenkins, GitLab, SonarQube, CI/CD; OCI, GCP, AWS and Azure.
- **Quality and operations:** Unit testing, code review, Grafana, Prometheus, ELK, Python automation and AI-assisted engineering.

PROFESSIONAL EXPERIENCE

Technical Lead / Full-Stack Engineer | Blautech

Guatemala | Jun 2024 – Present

- Design and develop REST APIs and backend services using NestJS and FastAPI for telecom network management, monitoring, data processing, and integration between platform components.
- Contribute across Angular management interfaces, backend services, databases, ETL, and operational dashboards, connecting application features with the data used by operations teams.
- Build Python automation, scheduled jobs, and containerized background services to reduce manual work in recurring operational and data-processing workflows.
- Maintain Docker/Podman deployments and Nginx routing; troubleshoot production issues across applications, Linux, databases, integrations, and ETL services.
- Improve delivery quality through automated tests, code reviews, SonarQube remediation, vulnerability fixes, and deployment controls.
- Use AI coding agents for test generation, code analysis, documentation, and implementation tasks, with human review and validation before integration.
- Coordinate 4–6 engineers across two telecom projects; translate client requirements into technical work, review implementation choices, and manage delivery priorities.

PROFESSIONAL EXPERIENCE CONTINUED

Mid Full-Stack Developer | Rootstack

Panama | Dec 2023 – May 2024

- Developed frontend and backend features for an insurance platform using Next.js, Tailwind CSS, C#/.NET, and a Web API microservices architecture.
- Implemented token generation and validation, request-validation middleware, user management, and permissions; contributed to Identity Server-based single sign-on.
- Worked on Entity Framework migrations and database seeding; containerized .NET services with Docker/Docker Compose and implemented Jenkins and SonarQube quality gates.
- Maintained Laravel services and custom migration commands supporting SQL-to-Elasticsearch data workflows.

Full-Stack Developer / Technical Lead | Blautech

Guatemala | Feb 2021 – Nov 2023

- Delivered features for a TypeScript/NestJS/Nuxt/Vue application, combining backend development with frontend contributions and endpoint unit tests to meet coverage requirements.
- Coordinated final-sprint delivery as Technical Lead, completing pending features and aligning the team on implementation priorities.
- Developed telecom monitoring solutions with Python, Ruby, ELK/Elasticsearch, and Logstash, including vendor-specific alarm-processing rules and data pipelines.
- Built CI/CD practices using Jenkins, Docker, Kubernetes, GitLab, Nexus, and SonarQube.

IT Engineer / Tester | Ericsson

Guatemala | Feb 2019 – Jan 2021

- Supported enterprise telecom delivery through engineering, testing, and operational technology activities.

JavaScript Developer | CloudIT4

Guatemala | Feb 2016 – Jan 2019

- Developed JavaScript solutions and a GPS tracking platform on GCP using virtual machines, serverless functions, NoSQL/Datastore, cloud storage, and AI APIs.
- Implemented Odoo environments and Python customizations; supported Windows Server monitoring with Nagios.

ARCHITECTURE AND LEADERSHIP

Experience leading engineering teams and designing end-to-end solutions across frontend, backend, and cloud infrastructure. Translate business requirements into cohesive solution architectures, guide implementation, and work with the team to maintain code quality, review changes, and follow through on testing throughout delivery.

EDUCATION AND LANGUAGES

Bachelor of Science and Systems Engineering — University of San Carlos of Guatemala, 2023

Spanish: Native | English: B2 — Upper Intermediate
